This is an an app that will be able to track your bus using real time geo locator tracker on peoples phone when they decide to check in a bus. I will implement a system that uses pictures of places they will pass by on their route. The more places you swipe to confirm that you passed it the more points you will get. By the end of the month if you reach a certain amount of points you get a prize (20% of chilis, free iPad, etc.)

Basics

- Be able to check into a bus stop.
- Once your on the bus it will ask if your on the bus.
- Once on the bus it will turn on GPS to use real time location.

Features

- When people are on the bus they confirm the places they pass for points.
- If you accumulate enough points, by the end of the month you get a prize. (20% of chilis, free iPad, etc.)

Process

- Make Ajax calls that pushes longitude coordinates to the google API when pressing the button.
- Use Codeigniter to build this.
- When selecting the bus, show the bus chat (forum).
- Notify them when bus is close.
